
ANIMOGRAPHY.

Important Information

In order to properly use our animated typefaces, you need to install Font Manager or Animography Controller.

Font Manager is a script that will help you with typesetting, creating controllers, creating your own animated typefaces, and much more. It can read animated typefaces in both .aep and .jsx format.

Animography Controller is a free script with just one button that will simply create a controller for the characters you have selected.

You can find both tools at: animography.net/collections/extras

Installing animated typefaces with .jsx format

- Step 01:** Go to: Adobe [After Effects \[version\]/Scripts/Script UI Panels/Font Manager Library](#)
 - Step 02:** Drag the contents of the JSX folder (TypefaceName.jsxbin & the folder TypefaceName) to the Font Manager Library folder.
 - Step 03:** Hit the refresh button in Font Manager. Et voila! The animated typefaces can now be found in the dropdown menu of Font Manager.
-
